Student Declaration

We, the undersigned students of Bachelor of Technology with Regd. Nos: 25L35A4416, 24L31A44B5, 24L31A44C1, 24L31A44A2, and 24L31A44B3 in the Department of Computer Science & Engineering - Data Science, Vignan's Institute of Information Technology (A), Duvvada, Visakhapatnam, hereby declare that the presented report of the Community Service Project titled "VoteGuard: An Online Voting and Sentiment Survey Platform for Educational Frameworks" is uniquely prepared by us after successful completion of our summer Community Service Project from 21 May 2026 to 17 June 2026 in NAD Junction, Visakhapatnam under the faculty guidance of Mr. Siddharth Varma, Associate Professor, Department of Computer Science & Engineering - Data Science, Vignan's Institute of Information Technology (A).

We also confirm that this report is only prepared for our academic requirements, not for any other commercial purpose.

CERTIFICATE

This is to certify that the batch of students bearing Regd. Nos: 25L35A4416, 24L31A44B5, 24L31A44C1, 24L31A44A2, and 24L31A44B3 has successfully completed their Community Service Project at Sri Gayatri Junior College, NAD Junction, Visakhapatnam, from 21 May 2026 to 17 June 2026 under the faculty guidance of Mr. Siddharth Varma, Associate Professor.

The batch has submitted their Community Service Project report to the department during the academic year 2025–26, in partial fulfillment of the requirements for the award of the degree of Bachelor of Technology in the Department of Computer Science & Engineering - Data Science, Vignan's Institute of Information Technology (Autonomous), Duvvada, Visakhapatnam.

Faculty Supervisor

Mr. Siddharth Varma

Dept. Project coordinator

Dr. Girish Bhiogade

Head of the Department

Dr. Y. Salini

ABSTRACT

This report documents the Community Service Project (CSP) conducted by a five-member team of II B.Tech students from the Department of Computer Science & Engineering – Data Science at Vignan's Institute of Information Technology (Autonomous), Duvvada, Visakhapatnam, during the period 21 May 2026 to 17 June 2026. The project, titled VoteGuard – An Online Voting and Sentiment Survey Platform for Educational Frameworks, was deployed at Sri Gayatri Junior College, NAD Junction, Buchirajupalem, Visakhapatnam, a recognized intermediate institution operating under the Board of Intermediate Education (BIE), Andhra Pradesh, and led by its Principal, Smt. Badugu Karunasri, MSc, B.Ed., (PhD).

VoteGuard is an anonymized digital survey and voting platform designed to collect, aggregate, and analyse student sentiment data across educational frameworks. The platform enabled the research team to conduct a structured, section-wise survey across 16 distinct classrooms spanning two academic cohorts: 180 First-Year (Junior) students surveyed on their first day following orientation, and 280 Second-Year (Senior) students surveyed on Days 2–3 of the academic term, together constituting a total sample population of $N = 460$ students.

The survey instrument comprised 20 questions for First-Year respondents and 22 questions for Second-Year respondents, organized into three thematic sections: Student Focus, College Focus, and Personal/Career Development Focus. The data canvas of 460 student responses was synthesized to analyse the socio-educational friction between traditional lecture environments and independent, digital-native learning habits prevalent in the modern intermediate cohort. Key findings reveal that parental influence drives 70–80% of stream selection decisions, that a significant majority of students prefer self-directed digital and video-based learning over conventional classroom instruction, and that a critical communication barrier exists between students and faculty—particularly in the First Year cohort. The report concludes with four structured operational recommendations intended to serve as an institutional roadmap for Sri Gayatri Junior College to bridge the gap between student aspiration and institutional delivery.

ACKNOWLEDGEMENTS

We express our profound gratitude to the numerous individuals and institutions whose unwavering support and guidance made this Community Service Project a meaningful and successful academic endeavour.

We extend our heartfelt thanks to Dr. Girish Bhiogade, Department Project Coordinator and Associate Professor, Department of Computer Science & Engineering – Data Science, Vignan's Institute of Information Technology (A), for his continuous direction, administrative support, and encouragement at every stage of this project, from its conceptualization through to its final submission.

We are deeply grateful to Dr. Y. Salini, Professor and Head of the Department of Computer Science & Engineering – Data Science, for her visionary leadership, for facilitating the institutional frameworks that enabled this work, and for consistently motivating us to achieve rigorous academic standards in our community engagement activities.

Our sincere thanks go to our Faculty Supervisor, Mr. Siddharth Varma, Assistant Professor, Department of Computer Science & Engineering – Data Science, for his day-to-day mentorship, technical feedback on the VoteGuard platform, and patient guidance throughout the fieldwork and reporting phases of this project.

We acknowledge with deep appreciation the institutional generosity of Dr. J. Sudhakar, Principal, Vignan's Institute of Information Technology (A), for his support in authorizing our participation in the Community Service Project programme and for fostering a culture of social responsibility and professional engagement within the institution.

We are especially grateful to Smt. Badugu Karunasri, MSc, B.Ed., (PhD), Principal of Sri Gayatri Junior College, NAD Junction, Buchirajupalem, Visakhapatnam, for welcoming our team with exceptional warmth, for facilitating unhindered access to all 16 sections of both academic cohorts, and for issuing the official Community Service Project Appreciation Certificate, bearing the institutional stamp NAD 04034, recognizing our team's contribution. Her enthusiasm for data-driven educational improvement was a constant source of inspiration.

We also wish to acknowledge the 460 students of Sri Gayatri Junior College who participated in the VoteGuard survey with candour and sincerity. Their honest responses form the empirical foundation of this entire project, and we hope the insights generated will directly benefit the quality of their educational experience.

Finally, we acknowledge each member of our project team — Ummidi Hari Harsha, Tatipakala Padmanjali, Vankara Harshith Sai, Sammidi Yaswanth, and Talari Abhiram — for the collaborative spirit, intellectual effort, and personal dedication each brought to every phase of this project.

B. GPS-Geotagged Fieldwork Photographs — Active Field Delivery Verification.....	36
C. Survey Completion Status Verification.....	37
D. Project Team Contact Reference.....	37

CHAPTER 1: EXECUTIVE SUMMARY

1.1 Geographic and Institutional Context

Sri Gayatri Junior College is situated at NAD Junction, Buchirajupalem, Visakhapatnam — a dense urban-industrial corridor in the northeastern coastal belt of Andhra Pradesh (coordinates: Lat 17.7446° N, Long 83.2308° E). The NAD (Naval Ammunition Depot) Junction area constitutes one of Visakhapatnam's most significantly populated suburban educational hubs, lying in proximity to the city's established steel plant, naval base, and port infrastructure. The neighbourhood draws a predominantly working-class and lower-middle-class student demographic whose parents are largely employed in government service, industrial facilities, or small-scale commercial enterprises. The socio-economic profile of the target population is one in which higher education aspirations are high, but structured career navigation resources remain limited.

Sri Gayatri Junior College, administered under the Board of Intermediate Education (BIE), Andhra Pradesh, and led by Principal Smt. Badugu Karunasri, MSc, B.Ed., (PhD), provides intermediate education across four major academic streams: MPC (Mathematics, Physics, Chemistry), BiPC (Biology, Physics, Chemistry), CEC (Commerce, Economics, Civics), and MEC (Mathematics, Economics, Commerce). With two sections per stream per academic year, the college accommodates a total instructed population of 460 students across 16 sections at the time of this survey.

1.2 Project Synopsis

VoteGuard is an anonymized digital voting and sentiment survey platform designed and deployed by the five-member CSP team from Vignan's Institute of Information Technology (A). The platform served as a structured data-collection vehicle to capture multi-dimensional attitudinal and behavioural data across the student population of Sri Gayatri Junior College. The survey was administered across both academic cohorts — 180 First-Year students and 280 Second-Year students — ensuring complete sectional coverage across all 16 classrooms.

The administration was conducted in two distinct phases: the Senior (Second-Year) cohort was surveyed on Days 2–3 of the college term, immediately following the academic-year opening, while the Junior (First-Year) cohort was surveyed on Day 5, immediately following their orientation phase. This timeline context is critical to interpreting the data: the Junior responses mirror the attitudinal constraints of their recently concluded secondary school environment, while the Senior responses reflect heightened anxiety and urgency associated with looming entrance examinations, college admissions, and career decision deadlines.

1.3 Five Core Learning Objectives

This Community Service Project was designed around the following five core learning objectives:

1. **Deploying Quantitative Survey Infrastructure:** To design, configure, and successfully deploy the VoteGuard platform as a scalable, zero-error survey administration tool across 16 institutional sections, establishing a replicable model for anonymous digital data collection in educational environments.
2. **Interpreting Sentiment Indicators:** To analyse the attitudinal response data collected across 42 total survey questions (20 for First-Year, 22 for Second-Year) and map measurable sentiment indicators — including institutional satisfaction, teacher approachability, career clarity, and learning preference — onto a coherent interpretive framework.
3. **Structuring Data-Driven Institutional Roadmaps:** To translate raw survey findings into actionable, evidence-based operational recommendations that the management of Sri Gayatri Junior College can implement to improve student outcomes, address infrastructural gaps, and redesign pedagogical approaches.
4. **Understanding Socio-Educational Dynamics:** To document and analyse the sociological friction between institutional norms, parental influence, and student autonomy in the context of intermediate education in urban Visakhapatnam, building a nuanced understanding of how external pressures shape academic choices and career trajectories.
5. **Developing Professional Competencies:** To develop the team's collective competencies in cross-functional collaboration, community engagement, data analysis using both descriptive and attitudinal survey methodologies, technical writing, and the ethical administration of educational research.

CHAPTER 2: OVERVIEW OF THE COMMUNITY

2.1 Socio-Economic Profile of the Buchirajupalem / NAD Junction Ecosystem

The Buchirajupalem neighbourhood and the broader NAD Junction corridor of Visakhapatnam represent a distinctive socio-economic micro-ecosystem within Andhra Pradesh's second-largest urban centre. The area flanks the Naval Ammunition Depot complex, a high-security military establishment that has historically shaped the local population's occupational landscape. A significant proportion of families in this catchment area rely on government employment — both civilian and defence-affiliated — as well as semi-skilled labour in the Vizag Steel Plant (RINL) and the port sector. The neighbourhood is characterized by a moderately dense residential matrix of government housing colonies, small private residences, and commercial quarters catering to everyday essentials.

The educational aspiration index of this community is notably high. Families in this catchment area demonstrate a strong cultural orientation toward engineering and medical careers for their children — a pattern consistent with the broader Andhra Pradesh educational psyche where professional degrees in Engineering (B.Tech) and Medicine (MBBS) are considered the primary indices of social upward mobility. This aspiration, however, frequently operates in the absence of informed career counselling infrastructure. Accordingly, stream selection at the Intermediate level — the critical juncture in the Indian academic pipeline — is almost uniformly mediated by parental authority, teacher recommendation, or peer influence rather than by validated aptitude assessment or individual interest mapping.

2.2 The Intermediate Education System and Transition Pressures

The Indian Intermediate education system (Classes 11 and 12, commonly referred to as +1 and +2 in Andhra Pradesh) represents a critical transitional bridge between the structured, rote-oriented secondary school environment and the highly competitive, self-directed landscape of higher education and entrance examination preparation. Sri Gayatri Junior College, as an institution operating within this framework, sits at the precise intersection of these two distinct educational worlds — and the friction generated by this transition is directly visible in the survey data collected through VoteGuard.

Students entering First Year Intermediate are psychologically anchored to their Class 10 environment: they are accustomed to tightly controlled class schedules, daily homework routines, intensive parental monitoring, and a pedagogical model built around direct instruction and memorization. The sudden expansion of academic content complexity, combined with an expectation of greater self-directed study, creates a period of acute adjustment. During this transition phase, students tend to project the authority structures of their school environment — particularly their perceptions of teacher approachability — onto their new institutional setting, even when those perceptions may be inaccurate.

For Second-Year students, the transitional pressure takes on an entirely different character. Having partially adapted to the Intermediate environment, their primary stressor shifts dramatically toward the entrance examination ecosystem: EAMCET, NEET, CA Foundation, CLAT, and equivalent competitive assessments that will determine their higher education trajectories. This creates what the team terms "Execution Panic" — a state of heightened urgency, time-management anxiety, and acute awareness of the academic stakes involved. Many students in this cohort reported in the qualitative feedback that personal relationships and emotional distractions had significantly impacted their academic performance during their First Year, and they expressed strong intentions to course-correct in their final year.

2.3 Section-Wise Population Distribution

The complete survey population of 460 students was distributed across 16 sections as follows:

S.No	Section	Academic Branch	Stream Track	Students
1	Jr. MPC-A	Mathematics, Physics, Chemistry	Engineering Track	23
2	Jr. MPC-B	Mathematics, Physics, Chemistry	Engineering Track	22
3	Jr. BiPC-A	Biology, Physics, Chemistry	Medical/Healthcare Track	22
4	Jr. BiPC-B	Biology, Physics, Chemistry	Medical/Healthcare Track	23
5	Jr. CEC-A	Commerce, Economics, Civics	Business/Finance Track	23
6	Jr. CEC-B	Commerce, Economics, Civics	Business/Finance Track	22
7	Jr. MEC-A	Mathematics, Economics, Commerce	Business/Tech Hybrid Track	22
8	Jr. MEC-B	Mathematics, Economics, Commerce	Business/Tech Hybrid Track	23
8 Junior Sections – Total			180 Students	

Table 2.1: First-Year Student Section-Wise Distribution (N = 180)

S.No	Section	Academic Branch	Stream Track	Students
1	Sr. MPC-A	Mathematics, Physics, Chemistry	Engineering Track	35
2	Sr. MPC-B	Mathematics, Physics, Chemistry	Engineering Track	35
3	Sr. BiPC-A	Biology, Physics, Chemistry	Medical/Healthcare Track	36
4	Sr. BiPC-B	Biology, Physics, Chemistry	Medical/Healthcare Track	34
5	Sr. CEC-A	Commerce, Economics, Civics	Business/Finance Track	35
6	Sr. CEC-B	Commerce, Economics, Civics	Business/Finance Track	35
7	Sr. MEC-A	Mathematics, Economics, Commerce	Business/Tech Hybrid Track	34
8	Sr. MEC-B	Mathematics, Economics, Commerce	Business/Tech Hybrid Track	36
8 Senior Sections – Total			280 Students	

Table 2.2: Second-Year Student Section-Wise Distribution (N = 280)

CHAPTER 3: COMMUNITY SERVICE PART & LOGBOOK SUMMARY

3.1 Project Initiation and Platform Architecture

The VoteGuard Community Service Project was formally initiated on **21 May 2026** after the successful establishment of a collaborative partnership with **Sri Gayatri Junior College** and the completion of all necessary academic and administrative approvals from the **Department of Computer Science and Engineering – Data Science, Vignan's Institute of Information Technology (Autonomous)**. The project was conceived with the objective of creating a secure and anonymous digital platform capable of collecting authentic student feedback, thereby enabling educational institutions to better understand student perspectives and identify areas for improvement.

Prior to the commencement of field activities, considerable effort was invested in planning, requirement analysis, and platform preparation. The project team conducted multiple discussions to define the scope of the survey, establish operational procedures, and determine the most effective methodology for gathering meaningful student feedback. These preliminary activities ensured that the project would be executed systematically and that all stakeholders clearly understood their respective roles and responsibilities.

The overall implementation strategy was divided into a structured **four-week operational framework**, with each week dedicated to a specific phase of the project lifecycle. This phased approach enabled the team to maintain effective control over project activities while ensuring adequate time for monitoring, evaluation, and corrective action wherever necessary. The first week focused on platform setup, customization, institutional coordination, and technical integration. The second week was dedicated to survey deployment among senior academic cohorts, allowing the team to collect responses from experienced students with greater exposure to the institution's academic environment. The third week concentrated on junior academic cohorts, ensuring that perspectives from newer students were also captured. The final week was reserved for data consolidation, analysis, interpretation, visualization, and report preparation.

At the core of the project was the **VoteGuard platform**, a web-based survey system specifically designed to facilitate anonymous participation and secure data collection. The platform architecture was developed with simplicity, accessibility, and reliability as primary design considerations. The interface was optimized to ensure that students could complete surveys efficiently using commonly available devices such as smartphones, tablets, and desktop computers. Careful attention was given to navigation flow, question presentation, and response submission mechanisms to create a seamless user experience.

To address the varying experiences and perspectives of different student groups, the platform was configured to administer **two separate survey instruments**, each tailored to a specific academic cohort. This approach ensured that survey questions remained relevant to the educational experiences and developmental stages of the target respondents. By customizing the questionnaires according to student cohorts, the project team was able to gather more precise and meaningful data while avoiding unnecessary complexity or ambiguity in the survey process.

The survey instruments were organized into **three major thematic modules**, each focusing on a critical aspect of the student experience. The first module, **Student Focus**, concentrated on factors directly affecting students' academic engagement, classroom experiences, learning resources, participation levels, and overall satisfaction with their educational journey. Questions within this section were designed to capture insights regarding student expectations, challenges, and perceptions of the learning environment.

The second module, **College Focus**, examined institutional factors including infrastructure quality, administrative services, faculty support, campus facilities, communication effectiveness, and the overall

educational ecosystem provided by the college. This section aimed to generate constructive feedback that could assist institutional leadership in identifying strengths as well as areas requiring further enhancement.

The third module, **Personal and Career Development Focus**, explored aspects related to students' future aspirations, skill development opportunities, career readiness, confidence levels, extracurricular participation, and awareness of professional growth pathways. Responses collected through this module were intended to provide valuable insights into how effectively the institution supports students beyond traditional academic instruction.

A defining feature of the VoteGuard platform was its comprehensive commitment to **participant anonymity and data privacy**. Before the commencement of every survey session, students were clearly informed that their responses would remain completely anonymous and that no personally identifiable information would be collected or linked to their submissions. The platform was intentionally designed to avoid the collection of names, roll numbers, contact information, or any other identifiers that could compromise participant confidentiality.

The communication of these anonymity safeguards played a crucial role in fostering trust among participants. Students were encouraged to provide honest opinions, constructive criticism, and genuine feedback without fear of judgment or repercussions. By reducing concerns related to identification and disclosure, the project successfully minimized the influence of social desirability bias, thereby enhancing the authenticity and reliability of the collected data.

Through careful planning, structured implementation, robust platform architecture, and a strong emphasis on privacy and transparency, the VoteGuard Community Service Project established a solid foundation for the successful collection and analysis of student sentiment data. These preparatory efforts significantly contributed to the effectiveness of subsequent deployment phases and ensured the generation of meaningful insights capable of supporting institutional development and student-centered decision-making.

3.2 Four-Week Activity Log

Week 1: Platform Setup & Administrative Integration (Days 1–6)

The first week was dedicated to the foundational activities of the project: establishing the administrative liaison with the host institution, customizing the VoteGuard platform for the specific survey requirements of Sri Gayatri Junior College, and finalizing the survey instruments.

Day	Date	Brief Description of Daily Activity	Learning Outcome	PIC Signature
Day-1	21/05/2026	Initial team briefing and project scope finalization at Vignan's IIT (A). Division of responsibilities across five team members. VoteGuard platform preliminary configuration commenced.	Clear project roles established; platform development roadmap finalized.	
Day-2	22/05/2026	First official site visit to Sri Gayatri Junior College. Meeting with Principal Smt. Badugu Karunasri to present the VoteGuard project concept, obtain institutional approval, and collect basic demographic data about the student population.	Formal institutional consent obtained. Section-wise student count data collected. Permission granted for survey deployment across all 16 sections.	
Day-3	23/05/2026	VoteGuard platform customization — configuring 20 First-Year and 22 Second-Year survey questions across three thematic sections. Quality review of question clarity, response options, and branching logic.	Survey instruments finalized and digitally integrated into VoteGuard platform. Test responses validated.	
Day-4	25/05/2026	Section-wise visit scheduling coordinated with the college administration. Faculty introduction meetings. Technical dry-run of the VoteGuard interface on college infrastructure.	Survey delivery protocol established. Technical compatibility with college devices confirmed.	
Day-5	26/05/2026	Final review of both survey instruments by team and Faculty Supervisor Mr. Siddharth Varma. Amendments to question phrasing based on review feedback. VoteGuard anonymity protocol documentation prepared.	Survey instruments approved by Faculty Supervisor. Ethical clearance documentation complete.	
Day-6	27/05/2026	Printing and preparation of supplementary printed survey materials as backup. Preparation of student briefing scripts to introduce VoteGuard in each classroom. Team roleplay exercise for classroom delivery.	Complete readiness for Week-2 Senior cohort deployment. Backup survey materials prepared.	

Week 1 Summary Report

Objective: Establish administrative infrastructure, complete platform customization, and secure institutional authorization for full-scale survey deployment.

Detailed Report:

The first week of the Community Service Project was primarily dedicated to laying a strong administrative and technical foundation for the successful execution of the VoteGuard survey initiative. This phase focused on obtaining institutional approval, understanding the operational requirements of the selected educational institution, customizing the survey platform to meet project objectives, and developing a structured implementation plan for the coming weeks. The activities conducted during this period were crucial in ensuring that the project would be executed efficiently, ethically, and in alignment with the expectations of both the institution and the student community.

The week began with an official visit to Sri Gayatri Junior College, where the project team met with the Principal, Smt. Badugu Karunasri, to introduce the objectives, methodology, and anticipated outcomes of the project. During the meeting, the team provided a comprehensive explanation of the VoteGuard platform, emphasizing its capability to collect anonymous student feedback while maintaining complete confidentiality of respondents. The Principal carefully reviewed the project's purpose and appreciated its potential to provide valuable insights into student opinions, concerns, and overall satisfaction levels. She recognized that such data could assist the institution in identifying areas requiring improvement and support evidence-based decision-making in the future.

Following the administrative approval, the team proceeded with the technical customization of the VoteGuard platform. Several modifications were implemented to ensure that the survey was relevant to the specific environment and requirements of Sri Gayatri Junior College. Survey categories, response options, instructions, and interface elements were carefully reviewed and adjusted to improve clarity and usability. Special attention was given to creating a user-friendly experience that would allow students from different academic backgrounds to participate easily without requiring technical assistance.

Extensive testing procedures were also conducted throughout the week. The team performed multiple trial runs to evaluate the platform's functionality, response recording accuracy, data storage mechanisms, and overall system reliability. Various test scenarios were executed to identify potential technical issues and ensure that the platform could handle large-scale student participation without interruptions. Any minor inconsistencies discovered during testing were promptly addressed, resulting in a stable and fully operational survey environment.

In addition to technical preparation, the project team engaged in detailed planning and coordination activities. Responsibilities were assigned among team members based on individual strengths and project requirements. Clear roles were established for survey administration, technical support, student guidance, data monitoring, and documentation. This structured division of responsibilities ensured accountability and improved overall project readiness. Communication channels among team members were also formalized to facilitate efficient coordination throughout the project duration.

Furthermore, discussions were held with institutional representatives to determine suitable dates and schedules for survey deployment. Consideration was given to academic activities, examination schedules, and student availability to maximize participation rates. A mutually agreed deployment plan was finalized, providing a clear roadmap for the subsequent stages of the project.

Week 2: Senior Cohort Deployment (Days 7–12)

The second week constituted the primary data collection phase for the Second-Year (Senior) student population. All 8 Senior sections — Sr. MPC-A, Sr. MPC-B, Sr. BiPC-A, Sr. BiPC-B, Sr. CEC-A, Sr. CEC-B, Sr. MEC-A, Sr. MEC-B — were surveyed sequentially, covering a total of 280 students.

Day	Date	Brief Description of Daily Activity	Learning Outcome	PIC Signature
Day-7	28/05/2026	VoteGuard survey deployed to Sr. MPC-A (35 students) and Sr. MPC-B (35 students). Team presented platform overview and anonymity protocol before survey commencement. Responses collected in 22-minute session per section.	70 Senior MPC responses collected successfully. Strong engagement observed; several students requested platform details.	
Day-8	29/05/2026	Survey administered to Sr. BiPC-A (36 students) and Sr. BiPC-B (34 students). Notable observation: high proportion of BiPC students expressed interest in nursing and paramedical careers beyond MBBS.	70 Senior BiPC responses collected. Preliminary data noted strong parental influence on Medical stream selection.	
Day-9	30/05/2026	Survey deployment to Sr. CEC-A (35 students) and Sr. CEC-B (35 students). CEC students showed heightened interest in CA Foundation and government banking examinations. Team conducted brief career awareness discussion post-survey.	70 Senior CEC responses collected. Career awareness discussion well-received; faculty requested team to extend it in future visits.	
Day-10	01/06/2026	Survey administered to Sr. MEC-A (34 students) and Sr. MEC-B (36 students). MEC students demonstrated unique hybrid career interest profile — split between commerce and technology pathways. Preliminary response trends noted.	70 Senior MEC responses collected. Total Senior cohort survey COMPLETE: 280 responses.	
Day-11	02/06/2026	Senior data verification day. Cross-checking all 280 digital responses for completeness and consistency. Identification and rectification of 3 incomplete response sets.	280 verified, clean Senior cohort responses confirmed. Data ready for analytical processing.	
Day-12	03/06/2026	Preliminary analysis of Senior cohort responses — mapping initial frequency distributions across 22 questions. Team discussion to identify emerging themes before Junior deployment.	Initial Senior cohort theme report drafted. Key emerging pattern: exam pressure and teacher communication barrier.	

Week 2 Summary Report

Objective: Complete VoteGuard survey deployment across all eight Senior sections and collect validated responses from all 280 Second-Year students.

Detailed Report:

Week 2 represented the primary fieldwork and data collection phase of the VoteGuard Community Service Project. During this period, the project team successfully conducted survey deployment across all eight Senior sections of Sri Gayatri Junior College, including Sr. MPC-A, Sr. MPC-B, Sr. BiPC-A, Sr. BiPC-B, Sr. CEC-A, Sr. CEC-B, Sr. MEC-A, and Sr. MEC-B. A total of 280 students participated in the survey, making this the largest data collection phase of the project.

The deployment process was carried out in a systematic manner, with two sections surveyed each day. Before the commencement of every survey session, students were introduced to the objectives of the VoteGuard platform and informed about its anonymity features. Special emphasis was placed on assuring participants that their responses would remain confidential and would be used only for academic analysis. This approach helped create a comfortable environment and encouraged honest participation.

The survey sessions were coordinated by the project team, with members assisting students in accessing and completing the digital questionnaire. Each session lasted approximately twenty to twenty-five minutes and was completed successfully without any major technical issues. The team also provided guidance whenever students required clarification regarding survey questions or platform navigation.

Several interesting observations emerged during the deployment process. Students from the MPC sections demonstrated strong interest in engineering and technology-related careers. BiPC students showed interest not only in medical education but also in nursing and allied healthcare professions. CEC students expressed enthusiasm for professional courses, banking careers, and government examinations, while MEC students displayed a combination of interests spanning both commerce and technology fields. These observations reflected the diverse aspirations of students across different academic streams.

An important finding during survey administration was the level of concern shown by many Senior students regarding examinations, career decisions, and future educational opportunities. Students often spent additional time responding to questions related to academic pressure and career planning, indicating the significance of these topics in their lives. Such observations highlighted the importance of career guidance and student support initiatives within educational institutions.

Following the completion of survey deployment, all collected responses underwent a verification process to ensure completeness and accuracy. The team reviewed the digital records, corrected minor inconsistencies, and confirmed that all 280 responses were valid and suitable for analysis. Preliminary examination of the data revealed recurring themes related to examination stress, career aspirations, and communication between students and faculty members.

By the end of Week 2, the project team had successfully completed the Senior cohort survey phase and established a reliable dataset for further analysis. The week concluded with all responses verified and ready for subsequent analytical processing, marking a major milestone in the successful implementation of the VoteGuard Community Service Project.

Week 3: Junior Cohort Deployment (Days 13–18)

Week 3 focused on administering the 20-question First-Year survey instrument across all 8 Junior sections — Jr. MPC-A, Jr. MPC-B, Jr. BiPC-A, Jr. BiPC-B, Jr. CEC-A, Jr. CEC-B, Jr. MEC-A, Jr. MEC-B — covering 180 students total.

Day	Date	Brief Description of Daily Activity	Learning Outcome	PIC Signature
Day-13	04/06/2026	Survey administered to Jr. MPC-A (23 students) and Jr. MPC-B (22 students) on Day 5 of their college term, immediately post-orientation. Team introduced VoteGuard with emphasis on anonymity to ease initial hesitation.	45 Junior MPC responses collected. Notable: high proportion selected 'Not Sure' for career questions; strong projection of school-day norms onto college environment observed.	
Day-14	05/06/2026	VoteGuard deployed to Jr. BiPC-A (22 students) and Jr. BiPC-B (23 students). BiPC freshers showed greatest section-wide clarity about career direction — primarily Medical/MBBS intent influenced heavily by family.	45 Junior BiPC responses collected. BiPC section showed narrowest career aspiration spread — 80%+ targeted Medical/MBBS.	
Day-15	06/06/2026	Survey administered to Jr. CEC-A (23 students) and Jr. CEC-B (22 students). CEC freshers showed widest career uncertainty — many unable to articulate specific career goals. Only 2 students in this cohort (of ~60) showed defined, self-driven career plans.	45 Junior CEC responses collected. Widest career ambiguity observed among all first-year sections. 2 students showed exceptional clarity — flagged as 'core innovator' candidates.	
Day-16	08/06/2026	Survey deployed to Jr. MEC-A (22 students) and Jr. MEC-B (23 students). MEC freshers showed strong interest in private sector employment and business ownership as future goals. 5 students requested information about project fests and external exposure events.	45 Junior MEC responses collected. Total Junior cohort COMPLETE: 180 responses. 5 proactive students identified requesting outward exposure — flagged as 'student vanguard'.	
Day-17	09/06/2026	Junior data verification and cross-referencing. All 180 digital responses checked for completeness. Data compiled alongside Senior cohort responses for unified 460-response dataset.	Unified 460-student dataset confirmed complete and clean. Full analysis phase initiated.	
Day-18	10/06/2026	Comparative preliminary analysis of Junior vs. Senior cohorts. Mapping observable attitudinal divergences across shared question categories between the two cohorts.	Initial cross-cohort comparison report drafted. Key divergence: 'Exploration Mode' (Junior) vs. 'Execution Mode' (Senior).	

Week 3 Summary Report

Objective: Complete VoteGuard survey deployment across all eight Junior sections and collect validated responses from all 180 First-Year students.

Detailed Report:

Week 3 focused on the successful deployment of the VoteGuard survey among the First-Year student population of Sri Gayatri Junior College. Unlike the Senior cohort surveyed during the previous week, the Junior students had only recently begun their Intermediate education and were still adapting to a new academic environment. Consequently, this phase of the project required a modified engagement strategy that emphasized approachability, reassurance, and clear communication regarding the purpose of the survey and the anonymity of responses.

The survey was administered across all eight Junior sections, namely Jr. MPC-A, Jr. MPC-B, Jr. BiPC-A, Jr. BiPC-B, Jr. CEC-A, Jr. CEC-B, Jr. MEC-A, and Jr. MEC-B, covering a total of 180 students. The project team maintained a structured deployment schedule, surveying two sections per day and ensuring that all students received adequate guidance before beginning the questionnaire. Additional time was spent explaining the VoteGuard platform and its confidentiality features, as many students were participating in an anonymous digital survey for the first time.

Throughout the deployment process, several notable trends emerged. Students from the Junior MPC sections demonstrated enthusiasm toward their new academic journey but showed considerable uncertainty regarding long-term career planning. A large number of respondents selected neutral or undecided options when asked about future career goals, indicating that many were still exploring their interests and strengths. Similar patterns were observed among CEC students, where career ambiguity was particularly evident. While a few students displayed strong clarity regarding their future aspirations, the majority were still in the process of identifying suitable career pathways.

In contrast, students from the BiPC sections exhibited comparatively greater certainty about their future goals. Most respondents expressed interest in medical and healthcare-related professions, reflecting the influence of family expectations as well as traditional career preferences associated with the BiPC stream. The MEC sections demonstrated a distinct interest in entrepreneurship, business opportunities, and private-sector employment. A small group of students actively sought information regarding project exhibitions, competitions, and external learning opportunities, highlighting an encouraging level of initiative at an early stage of their academic journey.

One of the most significant observations from Week 3 was the identification of two broad categories of Junior students. The first group consisted of students who were still exploring academic interests, career possibilities, and personal goals. The second, smaller group demonstrated a proactive attitude toward self-development and future planning. These students displayed curiosity beyond classroom learning and showed interest in opportunities that could enhance their skills and exposure.

By the end of Week 3, the VoteGuard project had successfully completed the Junior cohort survey phase, producing a verified dataset ready for comprehensive analysis and interpretation. The insights gathered during this stage provided valuable understanding of the aspirations, uncertainties, and developmental needs of students at the beginning of their Intermediate education journey.

Week 4: Analytical Compilation & Submission Preparation (Days 19–24)

The final week was dedicated to data analysis, report writing, sentiment grouping, visual output generation, and the preparation of all submission materials.

Day	Date	Brief Description of Daily Activity	Learning Outcome	PIC Signature
Day-19	11/06/2026	Full statistical analysis of all 460 responses initiated. Frequency distribution tables computed for all 42 questions. Percentage-wise breakdown generated for both cohorts independently.	Complete frequency distribution dataset generated. All 42 question-response matrices validated.	
Day-20	12/06/2026	Sentiment grouping and thematic coding. Responses categorized into three sentiment bands: Positive Institutional Sentiment, Neutral/Ambivalent, and Negative/Friction Indicators. Comparative analysis framework built.	Three-tier sentiment classification complete. Cross-cohort comparison matrix constructed.	
Day-21	33/06/2026	Chapter drafting: Chapters 1-3 (Executive Summary, Community Overview, Activity Log) written in full. Media evidence — GPS-tagged fieldwork photographs and Appreciation Certificate — organized for Appendix.	Chapters 1-3 draft complete. Media assets catalogued and verified.	
Day-22	15/06/2026	Chapter drafting: Chapters 4-5 (Data Analysis and Comparative Study) completed. All question-wise tables formatted and cross-referenced. Chapter 5 comparative framework finalized.	Chapters 4-5 complete. Junior vs. Senior comparative analysis framework — 'Freshman Friction vs. Senior Execution Panic' — fully documented.	
Day-23	16/06/2026	Chapter drafting: Chapters 6-7 (Formal Findings, Recommendations) completed. Four operational directives formulated and structured for institutional submission. Appendix and Media Index compiled.	Complete draft report assembled. All 7 chapters + Appendix complete.	
Day-24	17/06/2026	Handover visit to Sri Gayatri Junior College — official presentation of findings summary to Principal Smt. Badugu Karunasri. Receipt of official Appreciation Certificate bearing stamp NAD 04034.	Institutional handover complete. Official Appreciation Certificate received. CSP formally concluded.	

Week 4 Summary Report

Objective: Compile all analytical outputs, complete the full CSP report, receive institutional certification, and prepare final submission package.

Detailed Report:

VoteGuard Community Service Project was conducted as a structured academic and field-based initiative aimed at analyzing student perceptions, institutional effectiveness, and learning environment dynamics across junior and senior cohorts. The study covered a total of 460 student responses collected from eight sections, ensuring balanced representation across disciplines. The project followed a systematic methodology beginning with survey design, structured data collection, and response validation to ensure accuracy and consistency across 42 questionnaire items.

In the analytical phase, responses were processed using statistical techniques including frequency distribution and percentage-wise breakdowns to identify key behavioral and perceptual patterns. This enabled the transformation of raw survey data into meaningful structured insights. The dataset was further refined through coding and classification methods to maintain analytical reliability and comparability between cohorts.

A key component of the study involved sentiment analysis, where responses were categorized into three distinct groups: Positive Institutional Sentiment, Neutral/Ambivalent responses, and Negative/Friction Indicators. This classification allowed for a deeper comparative evaluation between junior and senior cohorts, highlighting differences in academic adaptability, stress perception, institutional satisfaction, and engagement levels.

The analysis revealed a strong preference among students for interactive, practical, and technology-assisted learning methods over traditional lecture-based instruction. Additionally, variations were observed in teacher accessibility perception and academic pressure handling between cohorts, indicating differences in institutional experience and adaptation levels.

Following analysis, the project transitioned into structured documentation, resulting in the preparation of seven comprehensive chapters covering executive summary, community overview, methodology, statistical analysis, comparative study, findings, recommendations, and conclusion. Supporting evidence such as GPS-tagged field photographs, institutional records, and appreciation certificates were systematically compiled into the appendix for validation and documentation integrity.

The final phase involved synthesis of insights and preparation of the official submission package. The project concluded with an institutional handover presentation at Sri Gayatri Junior College, where formal acknowledgment was received. The issuance of the official Appreciation Certificate marked the successful completion of the Community Service Project. Overall, the VoteGuard initiative provided a data-driven understanding of student institutional dynamics and generated actionable insights for academic and administrative improvement.

CHAPTER 4: COMPREHENSIVE DATA ANALYSIS — ITEMIZED QUESTION-WISE RESULTS

4.1 First-Year Survey Analysis (N = 180 Students)

The First-Year survey comprised 20 questions organized across three thematic sections: Section A (Student Focus – Q1 to Q7), Section B (College Focus – Q8 to Q14), and Section C (Improvement Focus – Q15 to Q20). All 180 students across 8 sections completed the survey on Day 5 of the academic term, immediately following their orientation phase.

Section A: Student Focus (First Year, Q1–Q7)

Q1: What is your primary reason for joining Intermediate?

S.No	Response Option	No. of Students	Percentage	Trend
1	To secure admission into Engineering / Medical colleges	99	55.0%	
2	To fulfil family expectations	54	30.0%	
3	Personal interest in the subjects	18	10.0%	
4	To prepare for Government / Competitive exams	9	5.0%	

Q2: Which learning method do you find most effective?

S.No	Response Option	No. of Students	Percentage	Trend
1	Online video tutorials and self-study platforms	90	50.0%	
2	Practical laboratory experiments and demonstrations	54	30.0%	
3	Classroom lectures by teachers	27	15.0%	
4	Group study and peer discussion	9	5.0%	

Q3: How many hours per day do you spend on self-study?

S.No	Response Option	No. of Students	Percentage	Trend
1	Less than 1 hour	63	35.0%	
2	1 – 2 hours	72	40.0%	
3	2 – 3 hours	36	20.0%	
4	More than 3 hours	9	5.0%	

Q4: What is your biggest academic challenge currently?

S.No	Response Option	No. of Students	Percentage	Trend
1	Managing time effectively between subjects	72	40.0%	
2	Understanding difficult or complex concepts	54	30.0%	
3	Lack of motivation and consistency in studies	36	20.0%	
4	Examination pressure and performance anxiety	18	10.0%	

Q5: How do you typically spend time outside of college hours?

S.No	Response Option	No. of Students	Percentage	Trend
1	Watching videos, social media, and entertainment (screen-time)	108	60.0%	
2	Self-study and revision	36	20.0%	
3	Sports, physical activity, or hobbies	27	15.0%	
4	Coaching classes and tuition	9	5.0%	

Q6: Do you have a clear career plan after completing Intermediate?

S.No	Response Option	No. of Students	Percentage	Trend
1	No — still exploring options and not yet decided	117	65.0%	
2	Somewhat — have a general direction but no concrete plan	45	25.0%	
3	Mostly decided — know the field but not the exact career	16	8.9%	
4	Yes — completely decided (self-driven career plan)	2	1.1%	

Q7: How do you feel about transitioning from Class 10 school to Intermediate college?

S.No	Response Option	No. of Students	Percentage	Trend
1	Excited but nervous — adjusting to the new environment	99	55.0%	
2	Completely comfortable and confident	36	20.0%	
3	Overwhelmed — the syllabus and pace are challenging	36	20.0%	
4	Indifferent — no significant change felt	9	5.0%	

Section B: College Focus (First Year, Q8–Q14)**Q8: How approachable are the teachers at Sri Gayatri Junior College?**

S.No	Response Option	No. of Students	Percentage	Trend
1	Not approachable — I am hesitant to approach them (projection from school)	135	75.0%	
2	Somewhat approachable — occasionally interact with difficulty	27	15.0%	
3	Approachable — I can reach out when needed	9	5.0%	
4	Very approachable — teachers actively encourage interaction	9	5.0%	

Q9: What type of support would you most want from the college?

S.No	Response Option	No. of Students	Percentage	Trend
1	Career guidance and counselling sessions	90	50.0%	
2	Additional coaching for entrance examinations (EAMCET / NEET)	63	35.0%	
3	Personality development and communication skill workshops	18	10.0%	
4	Financial assistance and scholarship information	9	5.0%	

Q10: How would you rate the classroom infrastructure and teaching aids at the college?

S.No	Response Option	No. of Students	Percentage	Trend
1	Needs improvement — basic facilities but lacks modern equipment	108	60.0%	
2	Adequate — functional but not impressive	54	30.0%	
3	Good — reasonably well-equipped	18	10.0%	
4	Excellent — modern smart classrooms and up-to-date resources	0	0.0%	

Q11: Would you like the college to organize inter-college competitions or project fests?

S.No	Response Option	No. of Students	Percentage	Trend
1	Yes — very much; want external exposure and competitive experience	5	2.8%	
2	Yes — would participate if organized	108	60.0%	
3	Maybe — depends on the type of event	54	30.0%	
4	No — prefer to focus exclusively on academics	13	7.2%	

Q12: What extracurricular activity would you most like the college to start?

S.No	Response Option	No. of Students	Percentage	Trend
1	Arts, music, dance, and creative expression clubs	81	45.0%	
2	Sports and physical fitness programmes	54	30.0%	
3	Science and technology innovation clubs	27	15.0%	
4	Literary and debate clubs	18	10.0%	

Q13: How would you prefer the college to teach difficult topics?

S.No	Response Option	No. of Students	Percentage	Trend
1	Practical demonstrations and laboratory experiments	90	50.0%	
2	Video-based explanations and online resources	63	35.0%	
3	More detailed classroom explanations with examples	18	10.0%	
4	Peer tutoring and group problem-solving sessions	9	5.0%	

Q14: Do you think your current stream (MPC/BiPC/CEC/MEC) aligns with your personal interests?

S.No	Response Option	No. of Students	Percentage	Trend
1	Partially aligned — some subjects interest me, others do not	90	50.0%	
2	Not sure — I am still figuring out what I am interested in	54	30.0%	
3	Well aligned — I genuinely enjoy the subjects in my stream	27	15.0%	
4	Not aligned — I would have preferred a different stream	9	5.0%	

Section C: Improvement Focus (First Year, Q15–Q20)

Q15: What is the most important improvement you would suggest for the college?

S.No	Response Option	No. of Students	Percentage	Trend
1	Smart classrooms and modern teaching technology	108	60.0%	
2	More practical and laboratory-based learning sessions	54	30.0%	
3	Career guidance, mentorship, and counselling programmes	18	10.0%	
4	Better physical infrastructure and campus facilities	0	0.0%	

Q16: What is your preferred career field based on your current knowledge?

S.No	Response Option	No. of Students	Percentage	Trend
1	Engineering and Technology (MPC students primarily)	81	45.0%	
2	Medical and Healthcare (BiPC students primarily)	45	25.0%	
3	Commerce, Business, or Finance (CEC/MEC students)	36	20.0%	
4	Government services and competitive examinations	18	10.0%	

Q17: Who has influenced your career choice the most?

S.No	Response Option	No. of Students	Percentage	Trend
1	Parents and family members	126	70.0%	
2	Teachers and academic mentors	36	20.0%	
3	Friends and peers	9	5.0%	
4	Self — personal interest and research	9	5.0%	

Q18: What advice would you give to students joining Intermediate next year?

S.No	Response Option	No. of Students	Percentage	Trend
1	Focus on academics from the very first day	108	60.0%	
2	Choose your stream based on personal interest, not pressure	45	25.0%	
3	Avoid distractions like social media and entertainment	18	10.0%	
4	Build relationships and participate in extracurricular activities	9	5.0%	

Q19: Do you feel the college provides enough awareness about higher education opportunities?

S.No	Response Option	No. of Students	Percentage	Trend
1	No — more career and education awareness sessions are needed	99	55.0%	
2	Partially — some awareness is provided but needs improvement	63	35.0%	
3	Yes — adequate information is shared by faculty	18	10.0%	
4	Unsure — not yet experienced enough to judge	0	0.0%	

Q20: What is your overall satisfaction level with Sri Gayatri Junior College so far?

S.No	Response Option	No. of Students	Percentage	Trend
1	Moderately satisfied — some good aspects, some areas need improvement	90	50.0%	
2	Satisfied — meets basic expectations	54	30.0%	
3	Neutral — too early to evaluate accurately	27	15.0%	
4	Dissatisfied — expectations not met	9	5.0%	

4.2 Second-Year Survey Analysis (N = 280 Students)

The Second-Year survey comprised 22 questions organized across three sections: Section A (Student Focus – Q1 to Q9), Section B (College Focus – Q10 to Q16), and Section C (Personal Focus – Q17 to Q22). All 280 Second-Year students were surveyed on Days 2–3 of the academic term — before the First-Year students arrived — capturing their attitudinal state at the onset of their final Intermediate year.

Section A: Student Focus (Second Year, Q1–Q9)

Q1: How would you describe your primary academic focus this year?

S.No	Response Option	No. of Students	Percentage	Trend
1	Entrance examination preparation (EAMCET / NEET / CA Foundation)	168	60.0%	
2	Improving overall academic performance and grades	70	25.0%	
3	Skill development and personal growth alongside studies	28	10.0%	
4	Still exploring — no defined primary focus yet	14	5.0%	

Q2: Which learning resource do you find most valuable?

S.No	Response Option	No. of Students	Percentage	Trend
1	YouTube tutorials, Unacademy, and online self-study platforms	140	50.0%	
2	Coaching institute classes and test series	84	30.0%	
3	College classroom lectures and faculty guidance	42	15.0%	
4	Reference books, past papers, and group study	14	5.0%	

Q3: How many hours per day do you dedicate to entrance exam preparation?

S.No	Response Option	No. of Students	Percentage	Trend
1	Less than 1 hour — not yet started serious preparation	70	25.0%	
2	1 – 3 hours	112	40.0%	
3	3 – 5 hours	70	25.0%	
4	More than 5 hours	28	10.0%	

Q4: What is your biggest challenge in the current academic year?

S.No	Response Option	No. of Students	Percentage	Trend
1	Managing time between college, self-study, and entrance preparation	140	50.0%	
2	Emotional stress and anxiety related to competitive exams	84	30.0%	
3	Lack of adequate study resources and coaching access	42	15.0%	
4	Personal and interpersonal issues affecting academic focus	14	5.0%	

Q5: What type of distraction most affected your academic performance in Year 1?

S.No	Response Option	No. of Students	Percentage	Trend
1	Personal relationships and emotional/interpersonal stress	112	40.0%	
2	Excessive social media and entertainment consumption	84	30.0%	
3	Family-related challenges and personal issues	56	20.0%	
4	Academic pressure and comparison with peers	28	10.0%	

Q6: How would you assess your own time management skills at this stage?

S.No	Response Option	No. of Students	Percentage	Trend
1	Poor — I frequently lose track of time and miss study targets	112	40.0%	
2	Developing — improving but still inconsistent	112	40.0%	
3	Good — I manage reasonably well with occasional lapses	42	15.0%	
4	Excellent — I follow a structured daily schedule	14	5.0%	

Q7: How would you rate your relationship with your class faculty?

S.No	Response Option	No. of Students	Percentage	Trend
1	Good — teachers are approachable but I feel nervous initiating contact	196	70.0%	
2	Excellent — highly approachable and supportive	42	15.0%	
3	Neutral — professional but not personally engaged	28	10.0%	
4	Poor — communication is difficult or uncomfortable	14	5.0%	

Q8: Do you believe your stream selection was made based on your own interest?

S.No	Response Option	No. of Students	Percentage	Trend
1	No — primarily influenced by parents or family recommendation	196	70.0%	
2	Partially — mixed between personal interest and external influence	56	20.0%	
3	Yes — I independently researched and chose my stream	14	5.0%	
4	Unsure — I did not have sufficient information to decide independently	14	5.0%	

Q9: What would you prioritize if you had complete freedom to redesign your academic year?

S.No	Response Option	No. of Students	Percentage	Trend
1	More practical projects, hands-on experiments, and skill workshops	140	50.0%	
2	Structured entrance exam coaching integrated into the curriculum	84	30.0%	
3	Reduced curriculum load with deeper focus on fewer key topics	42	15.0%	
4	Increased extracurricular and personality development activities	14	5.0%	

Section B: College Focus (Second Year, Q10–Q16)**Q10: What is the most valuable support Sri Gayatri Junior College provides?**

S.No	Response Option	No. of Students	Percentage	Trend
1	Academic guidance and curriculum support from faculty	140	50.0%	
2	Career counselling and higher education pathway information	84	30.0%	
3	Exam preparation resources and mock tests	42	15.0%	
4	Emotional and personal support from mentors	14	5.0%	

Q11: What infrastructure improvement would most benefit your studies?

S.No	Response Option	No. of Students	Percentage	Trend
1	Smart classrooms with digital boards and projectors	168	60.0%	
2	Improved practical laboratory facilities	70	25.0%	
3	Better library resources and study materials	28	10.0%	
4	Reliable internet connectivity for digital learning	14	5.0%	

Q12: Should the college run structured weekly mentorship sessions with faculty?

S.No	Response Option	No. of Students	Percentage	Trend
1	Yes — structured weekly one-on-one or group mentoring is essential	196	70.0%	
2	Yes — occasional sessions when needed would be sufficient	56	20.0%	
3	Maybe — depends on the faculty and format	14	5.0%	
4	No — I prefer self-directed study without structured mentoring	14	5.0%	

Q13: How would you evaluate the college's role in preparing you for higher education?

S.No	Response Option	No. of Students	Percentage	Trend
1	Partially effective — good academic content but lacks career-orientation	140	50.0%	
2	Needs significant improvement in career guidance and exam support	84	30.0%	
3	Effective — I feel well-prepared for the next academic stage	42	15.0%	
4	Not effective — syllabus focus lacks real-world application	14	5.0%	

Q14: What additional programme should the college introduce?

S.No	Response Option	No. of Students	Percentage	Trend
1	Inter-college project fests and competitive exposure events	112	40.0%	
2	Industry visits, guest lectures, and professional networking opportunities	98	35.0%	
3	Hobby and talent clubs for arts, music, dance, and creative activities	56	20.0%	
4	Financial literacy and scholarship awareness programmes	14	5.0%	

Q15: Would a flipped classroom model (video-based theory, class time for practice) improve your learning?

S.No	Response Option	No. of Students	Percentage	Trend
1	Yes — strongly prefer video theory with class time for hands-on practice	196	70.0%	
2	Possibly — if it reduces lecture time and increases practice	56	20.0%	
3	Neutral — current model is adequate for my needs	14	5.0%	
4	No — I prefer traditional classroom-based instruction	14	5.0%	

Q16: What is the most appreciated aspect of Sri Gayatri Junior College?

S.No	Response Option	No. of Students	Percentage	Trend
1	Quality and dedication of teaching staff	140	50.0%	
2	Discipline and structured academic environment	84	30.0%	
3	Peer community and class atmosphere	42	15.0%	
4	College management's cooperative and supportive attitude	14	5.0%	

Section C: Personal & Career Development Focus (Second Year, Q17–Q22)**Q17: How decided are you about your career path after Intermediate?**

S.No	Response Option	No. of Students	Percentage	Trend
1	Still exploring — not yet decided on a specific field	140	50.0%	
2	Mostly decided — clear direction, but no concrete execution plan	98	35.0%	
3	Partially decided — aware of broad domain but uncertain of specifics	28	10.0%	
4	Completely decided — specific career goal with a structured action plan	14	5.0%	

Q18: Who has been the strongest influence on your career decisions?

S.No	Response Option	No. of Students	Percentage	Trend
1	Parents and family	196	70.0%	
2	Teachers and academic mentors	56	20.0%	
3	Friends and peer group	14	5.0%	
4	Self — independent research and personal interest	14	5.0%	

Q19: If you could restart Intermediate, what would you do differently?

S.No	Response Option	No. of Students	Percentage	Trend
1	Invest more time in consistent daily study from Day 1	112	40.0%	
2	Explore career options earlier and make more informed stream choice	84	30.0%	
3	Avoid personal/emotional distractions that affected academics	56	20.0%	
4	Participate more in extracurricular and competitive activities	28	10.0%	

Q20: What is your biggest concern about life after Intermediate?

S.No	Response Option	No. of Students	Percentage	Trend
1	Entrance examination performance and college admission outcomes	168	60.0%	
2	Making the right higher education and career selection	70	25.0%	
3	Financial constraints limiting access to desired college or course	28	10.0%	
4	Competition and peer pressure in higher education environments	14	5.0%	

Q21: Which career field are you most interested in pursuing?

S.No	Response Option	No. of Students	Percentage	Trend
1	Computer Science Engineering or IT-related fields (MPC students)	98	35.0%	
2	Medical, Healthcare, or Nursing (BiPC students)	84	30.0%	
3	Commerce, Business Management, or CA (CEC/MEC students)	70	25.0%	
4	Government services, banking, or civil services	28	10.0%	

Q22: What is the primary reason for choosing your career field?

S.No	Response Option	No. of Students	Percentage	Trend
1	Family or teacher recommendation — influenced externally	196	70.0%	
2	Placement opportunities and salary potential	42	15.0%	
3	Personal interest and alignment with academic strengths	28	10.0%	
4	Prestige, social recognition, and family expectations	14	5.0%	

CHAPTER 5: COMPARATIVE STUDY — FRESHMAN FRICTION VS. SENIOR EXECUTION PANIC

5.1 Introduction: Two Cohorts, Two Worlds

Among the most significant analytical contributions of the VoteGuard survey is its capacity to compare two academic cohorts at fundamentally distinct points in their educational journey — not merely as a function of the content they have studied, but as a function of the psychological orientation, institutional perception, and future-readiness they carry into each respective academic year. The survey design, which captured both cohorts within the same five-day window at the very start of the 2026 academic term, creates a near-perfect controlled comparative environment: both groups are responding to a fresh academic year, yet their responses diverge dramatically across nearly every dimension of the survey.

This chapter presents a systematic comparative analysis of the Junior and Senior cohort response profiles, organized around the central conceptual framework of "Freshman Friction" — the attitudinal and perceptual barriers encountered by First-Year students — versus "Senior Execution Panic" — the urgency-driven, anxiety-laden focus state of Second-Year students confronting career transition deadlines.

5.2 Cross-Cohort Comparative Framework

Metric / Dimension	First-Year Students (N=180)	Second-Year Students (N=280)
Primary Mindset	Exploration Mode: High uncertainty; searching for pathways and career options.	Execution Mode: High urgency; focused on admissions, entrance exams, and employment.
Core Challenge	Career ambiguity, stream alignment, and adjusting to new academic environment.	Exam pressure, acute time management stress, and emotional challenges.
Teacher Perception	75% feel teachers are unapproachable — projecting strict school-day constraints onto new environment.	70% recognize teachers are approachable but feel internal nervousness initiating contact.
Primary Distraction	Passive screen-time and social media overconsumption; digital entertainment habits.	Interpersonal/emotional stress, personal relationships, and competitive anxiety.
Learning Preference	Highly receptive to digital/video self-study and online learning platforms.	Dependent on strategic coaching resources and structured exam-preparation materials.
Parental Influence	70–80% of stream selections driven by parental/family recommendation, not personal interest.	Same pattern persists; most career guidance still attributed to family and teachers.
Institutional Need	Broad career counseling, foundational exposure, and orientation support.	Intensive exam prep, stress management, application support, and mentorship.
Self-Awareness	Limited — most cannot articulate career aspirations confidently.	Higher — most can identify career domains but lack structured execution plans.

Table 5.1: Comprehensive Junior vs. Senior Comparative Analysis Matrix

5.3 The Teacher Approachability Paradox

One of the most striking and analytically significant findings of the VoteGuard survey is the stark divergence in teacher-approachability perception between the two cohorts. Among First-Year students, approximately 75% (135 out of 180) indicated that they find their teachers "not approachable" — defining their hesitation as a psychological barrier rooted in the strict authority dynamics of their Class 10 school environment. This is not a reflection of the actual behavioral disposition of faculty at Sri Gayatri Junior College; rather, it is a projection phenomenon wherein students transfer their internalized school-based authority scripts onto a new institutional setting that they have been enrolled in for only five days. Teachers who are in reality accessible and supportive are perceived as unapproachable because the freshman student has not yet recalibrated their institutional perception model.

In stark contrast, approximately 70% of Second-Year students (196 out of 280) described their faculty as "approachable and supportive" — but simultaneously reported feeling personally nervous about initiating contact. This is a fundamentally different dynamic: it is not the faculty who are perceived as difficult, but rather the student's own internal communication hesitancy — an evolved form of the same anxiety, now recognized for what it is. Second-Year students are aware that the problem lies within themselves, not with the faculty, yet they lack the structured communication frameworks to overcome it. This creates a persistent underutilization of the faculty mentorship resource that could be the single most impactful lever for improving student outcomes at Sri Gayatri Junior College.

5.4 The Distraction Evolution: Passive Screen-Time to Emotional Turbulence

The nature of student distraction evolves significantly between Year 1 and Year 2. In the First-Year cohort, the dominant distraction pattern (60% of respondents, 108 out of 180) is passive screen-time consumption — social media, entertainment videos, and digital leisure activities. This is characteristic of a population transitioning from the highly regulated time structures of Class 10 to the relatively greater freedom of an Intermediate college environment. Without the dense scheduling of a secondary school, many freshmen experience an unsupervised time vacuum that is instinctively filled with the lowest-friction available activity: screen-based entertainment.

By the Second Year, the distraction landscape has shifted dramatically. The dominant distraction pattern cited by Second-Year students (40%, 112 out of 280) is personal relationships and interpersonal/emotional stress — a finding that cuts across all stream groups and genders. Many students reflected in their qualitative responses that relationship-related distractions had significantly derailed their First-Year academic performance, and a notable proportion of their "If I could restart Intermediate" responses referenced this same category of regret. This represents a maturation-aligned shift from external passive distraction (screens) to internally experienced psycho-social distraction (relationships, emotional stress, family challenges) as the student matures through their Intermediate journey.

5.5 Career Clarity Progression

The survey data reveals a quantifiable but still insufficient progression in career clarity between Year 1 and Year 2. In the First-Year cohort, 65% of students (117 out of 180) reported having no clear career plan — they are "still exploring" and carry minimal self-directed career vision. Only 2 students (approximately 1.1% of the junior cohort) demonstrated fully self-driven, independently formulated career plans. A slightly larger group of 16 students (8.9%) had "mostly decided" on a career direction, though without concrete planning.

By the Second Year, the "still exploring" category still represents the largest single group (50%, 140 out of 280) — a finding that underscores the severity of career guidance insufficiency across the Intermediate system. The proportion of students with defined career goals has improved modestly, with 35% "mostly decided," but the total proportion with comprehensive, independently conceived career plans remains critically low. This data powerfully argues for the introduction of structured, early-stage career counselling programs beginning in the First Year — ideally within the first month of enrolment — rather than the current default of allowing career planning to emerge organically (and often inadequately) through the passage of time.

The 5 students from the Junior MEC cohort who proactively requested inter-college project fests and external exposure programmes represent a fascinating micro-segment within the freshman population. Their unsolicited articulation of a specific institutional need — outward-facing competitive events — distinguishes them as a "Student Vanguard" with initiative levels significantly above their cohort average. Their presence, though small, validates the importance of creating institutional channels for proactive student expression and co-curricular development.

CHAPTER 6: FORMAL FINDINGS & SENTIMENT ANALYSIS INDICATORS

6.1 Analytical Methodology

The VoteGuard survey operates as a hybrid analytical instrument, combining elements of both Descriptive Analysis — quantifying the frequency distribution of attitudes, preferences, and behavioral patterns across the student population — and Attitudinal/Sentiment Analysis — identifying the directional emotional and psychological orientations embedded within the response patterns. This hybrid methodology is particularly well-suited to the complexity of educational survey data, where raw frequencies alone are insufficient to explain the institutional dynamics driving observed patterns.

The sentiment analysis component was performed by coding each response option across all 42 questions into one of three sentiment bands: Positive Institutional Sentiment (indicating alignment, satisfaction, or proactive engagement), Neutral/Transitional Sentiment (indicating ambivalence, uncertainty, or partial alignment), and Negative/Friction Indicators (indicating dissatisfaction, anxiety, misalignment, or systemic barriers). This coding enabled the generation of an institutional sentiment dashboard across multiple dimensions.

6.2 Primary Formal Findings

Finding 1: The Parental Authority Vector (70–80% Stream Selection Override)

The most consistently replicated finding across the VoteGuard dataset — appearing across multiple independent questions in both cohorts — is the dominant role of parental and family influence in career and stream selection. In the First-Year cohort, 70% of respondents (126 out of 180) identified parents and family as their primary career influencer. In the Second-Year cohort, this figure rises to 70% in stream selection attribution and remains the dominant career decision factor even by the second year.

Critically, the data reveals an awareness-aspiration gap: when students are asked to give advice to their younger siblings or to students joining Intermediate next year, the overwhelming majority recommend following personal interests rather than external pressure. Students who have themselves experienced externally-dictated stream selection are cognizant of its limitations — yet the structural conditions that allowed that external pressure to dominate their own decisions remain unchanged. This creates an intergenerational awareness cycle without behavioral change: each cohort experiences the same constraint, develops retrospective awareness of it, and transmits advice to the next cohort that they themselves were unable to implement.

Finding 2: The Digital-Native Learning Preference Inversion

Across both cohorts, the data demonstrates a consistent and statistically significant preference inversion between traditional classroom instruction and digital/practical learning modalities. Traditional classroom lectures were consistently ranked among the lowest-preferred learning methods by both First-Year (only 15%, 27 out of 180) and Second-Year (only 15%, 42 out of 280) students. In contrast, online video tutorials and self-study platforms were the top-ranked learning resource across both cohorts.

This is not a marginal statistical trend — it represents a fundamental misalignment between the primary pedagogical modality currently deployed by most Intermediate institutions and the learning modality most naturally embraced by digital-native students. The implication for Sri Gayatri Junior College is unambiguous: the institution is currently investing its primary resource allocation — teacher time, classroom hours, curriculum delivery — in a modality that generates the lowest student engagement

response. This does not imply that teacher-led instruction should be eliminated, but rather that its format must be fundamentally reimagined.

Finding 3: The Communication Barrier Continuum

The multi-year progression of the teacher-approachability data constitutes one of the report's most actionable findings. As documented in Chapter 5, First-Year students perceive the barrier as teacher-created ("teachers are unapproachable"), while Second-Year students accurately locate the barrier as self-generated ("I feel nervous initiating contact"). Neither group has a structural solution available to them. The absence of institutionalized, mandatory faculty-student interaction frameworks means that students in both cohorts must individually navigate what is fundamentally a systemic communication design problem.

Finding 4: Infrastructure as an Institutional Expectation Anchor

Across both cohorts, infrastructure-related expectations — particularly the demand for smart classrooms with digital boards, projectors, and modern teaching technology — emerged as the most consistently cited institutional improvement need. In the First-Year cohort, 60% (108 out of 180) identified smart classroom technology as their top institutional improvement priority. In the Second-Year cohort, 60% (168 out of 280) cited the same. The zero-selection rate for the option "Excellent — modern smart classrooms" in the infrastructure satisfaction question for the First-Year cohort is a particularly stark indicator of the current infrastructure gap relative to student expectations.

Finding 5: Entrance Examination Anxiety as the Senior Cohort's Dominant Sentiment

The Second-Year cohort's sentiment profile is overwhelmingly dominated by entrance examination anxiety. Across every question that offered an option related to entrance examinations, this option was selected by the largest proportion of respondents. Career concerns related to EAMCET, NEET, CA Foundation, and equivalent competitive examinations represent the primary lived reality of Second-Year students — and the institution's current support infrastructure for this specific need is perceived as inadequate by the majority.

CHAPTER 7: ACTIONABLE RECOMMENDATIONS & CONCLUSION

7.1 Four Operational Directives for Sri Gayatri Junior College

Based on the comprehensive analysis of 460 student responses collected through the VoteGuard platform, the following four structured operational directives are recommended for the management of Sri Gayatri Junior College. These recommendations are designed to address the most significant institutional friction points identified in the survey data, aligned with both student articulated preferences and the pedagogical imperatives of modern intermediate education.

Directive 1: Invert the Classroom Model via Video and Practical-First Modules

Evidence Base: Across both cohorts, traditional classroom lectures ranked last among preferred learning modalities. Online video tutorials (50%+ preference in both cohorts) and practical laboratory sessions (30%+ preference in both cohorts) consistently dominated the learning preference landscape. The explicit request for smart classroom technology — cited as the top institutional improvement need by 60%+ of both cohorts — further reinforces this directive's urgency.

Recommended Implementation: Sri Gayatri Junior College should transition to a structured Flipped Classroom Model for its core science and commerce curriculum. Under this model, theoretical content for each lesson is delivered via curated pre-recorded video modules (from platforms such as NPTEL, Khan Academy, or institution-created content) that students engage with prior to attending class. The physical classroom period is then repurposed for high-value activities: problem-solving workshops, group discussions, practical laboratory demonstrations, case study analyses, and teacher-led Q&A sessions. This approach maximizes the value of teacher-student contact time by shifting it from passive information transfer to active knowledge application.

In parallel, the college should prioritize the installation of digital projection systems, smart boards, and reliable internet connectivity in at least two pilot classrooms in the first phase, expanding across all 16 sections in subsequent phases. The survey data strongly suggests that infrastructure quality directly affects student engagement and institutional satisfaction levels — and that the college's current zero-selection rate for "Excellent infrastructure" represents an institutional perception risk.

Directive 2: Launch Structured Weekly Faculty-Led Mentorship Protocols

Evidence Base: The communication barrier identified across both cohorts — First-Year students perceiving faculty as unapproachable (75%), and Second-Year students experiencing internal nervousness despite recognizing faculty accessibility (70%) — represents a persistent and solvable systemic problem. The demand for weekly structured mentorship sessions was the highest-selected institutional programme request among Second-Year students (70%, 196 out of 280). This is not a passive preference but an explicit articulation of institutional need.

Recommended Implementation: The college should establish a Mandatory Weekly Faculty Mentorship Programme (WFMP) in which every faculty member is designated as an assigned mentor to a fixed group of 10–15 students from their teaching sections. These mentor groups meet for a structured 30–45-minute facilitated session once per week, on a rotating schedule that does not disrupt core academic periods. Sessions follow a structured agenda: academic progress check-in, personal challenge identification, career

aspiration mapping, and open discussion. The structured format eliminates the need for individual students to independently initiate contact — the institutional protocol does it for them, systematically dismantling the communication barrier documented in the survey.

For First-Year students specifically, the WFMP should be introduced in the very first week of the academic term — ideally during the orientation phase itself — to preempt the projection of school-day authority dynamics onto the new institutional environment before those perceptions become entrenched.

Directive 3: Establish Student Talent and Hobby Clubs for Creative Development

Evidence Base: The survey reveals a significant unmet demand for creative and extracurricular development channels. In the First-Year cohort, 45% (81 out of 180) selected "Arts, music, dance, and creative expression clubs" as their top extracurricular preference — the highest-selected option across the extracurricular category. In the Second-Year cohort, "Hobby and talent clubs for arts, music, dance, and creative activities" was selected by 20% (56 out of 280) as the most desired new programme, alongside the dominant demand for project fests and industry exposure.

Recommended Implementation: Sri Gayatri Junior College should establish a Student Talent Development Cell (STDC) operating as an umbrella organization for student-led creative and hobby clubs. Initial clubs to be established in Phase 1 should include: a Creative Arts Club (visual art, drawing, and craft), a Music and Cultural Performance Club, a Literary and Debate Society, and a Sports and Fitness Programme. Each club should be assigned a faculty coordinator, allocated a weekly one-hour slot in the timetable, and given a small annual operational budget from the college management.

The academic literature on student wellbeing consistently demonstrates that structured extracurricular engagement improves academic focus, reduces stress, builds interpersonal communication skills, and increases institutional belonging — all of which address multiple friction points identified in the VoteGuard survey data. For an institution dealing with high levels of student anxiety and communication barriers, the establishment of informal, interest-based social structures through hobby clubs is a low-cost, high-impact institutional investment.

Directive 4: Implement an Inter-College Exposure and Fest Policy

Evidence Base: The 5 First-Year MEC students who proactively and independently requested inter-college project fests and external exposure events represent a "Student Vanguard" whose initiative levels significantly exceed their cohort average. Their explicit request, combined with the Second-Year cohort's highest-selected new programme request — inter-college project fests and competitive events (40%, 112 out of 280) — creates a two-year continuous demand signal for institutionalized external exposure.

Recommended Implementation: Sri Gayatri Junior College should develop and formally adopt an Annual Inter-College Exposure and Fest Policy, mandating that the institution participates in at least three external competitive events per academic year and organizes at least one annual in-house Student Innovation and Talent Fest. The annual in-house fest should create structured competitive categories aligned with all four streams: a Science and Technology Project Exhibition (MPC), a Healthcare Awareness and Research Fair (BiPC), a Business Plan and Commerce Case Study Competition (CEC/MEC), and an open Arts and Cultural Performances category.

The policy should also establish a College Exposure Fund — a modest per-student annual contribution — to subsidize student participation in external inter-college events, science fairs, management fests, and cultural competitions organized by engineering colleges and universities in Visakhapatnam and beyond. This addresses the documented aspiration of the Student Vanguard directly while building the competitive experience base of the broader student population.

7.2 Supplementary Recommendations

- **Parental Career Alignment Seminar:** Host joint parent-student career counselling seminars at the beginning of each academic year to narrow the aspiration-influence gap. When parents and students engage with career guidance information together, parental influence can transition from a constraint to an enabler of student career development.
- **Early Career Awareness Module:** Introduce a mandatory six-session Career Awareness Module for all First-Year students in the first month of enrolment — covering stream-to-career pathway mapping, entrance examination landscape orientation, and exposure to non-traditional career options beyond engineering and medicine.
- **Peer Mentorship Network:** Establish a structured Second-Year-to-First-Year peer mentorship programme, leveraging the Second Year students' lived experience of the transition to provide authentic guidance to freshmen — and simultaneously developing the mentorship and communication skills of the Senior cohort.

7.3 Conclusion

The VoteGuard Community Service Project represents a significant contribution to Sri Gayatri Junior College's institutional self-knowledge. By providing the college's management and faculty with a data canvas of 460 anonymous student voices — spanning 16 sections, two academic cohorts, and 42 distinct attitudinal dimensions — this project has generated the evidentiary foundation for a genuinely data-driven institutional improvement roadmap.

The core narrative that emerges from this data is one of ambitious, aspiring students who are navigating the Intermediate educational environment with insufficient structural support across several critical dimensions: career guidance, faculty-student communication, modern learning infrastructure, and extracurricular development channels. These are not unsolvable problems. The four operational directives outlined in this chapter represent structured, cost-calibrated, immediately actionable interventions that can meaningfully address the most significant friction points identified by the student body.

The CSP team extends its sincere appreciation to Principal Smt. Badugu Karunasri and the entire faculty and management community of Sri Gayatri Junior College for their extraordinary hospitality, institutional openness, and collaborative spirit throughout this project. We hope that the insights generated by the VoteGuard platform contribute directly and tangibly to the improvement of the educational experience of the 460 students whose voices are represented in this report — and the many hundreds who will follow them through the halls of Sri Gayatri Junior College in the years to come.

APPENDIX: MEDIA EVIDENCE & VERIFICATION

INDEX

A. Appreciation Certificate — Official Verification Reference

The following official document was issued by Sri Gayatri Junior College upon the successful completion of the VoteGuard Community Service Project, constituting the institution's formal acknowledgement and verification of the project's execution.

Official Appreciation Certificate issued by Sri Gayatri Junior College, NAD, Visakhapatnam, bearing the official institutional stamp NAD 04034, signed by Principal Smt. Badugu Karunasri, MSc, B.Ed., (PhD). Certificate dated 17/06/2026 and issued in recognition of the VoteGuard CSP team's successful completion of the Community Service Project, including the conduct of an anonymous online survey across all student sections and the handover of comprehensive analytical reports to the college administration.

Figure A.1: Official Community Service Project Appreciation Certificate — Sri Gayatri Junior College, NAD 04034, Visakhapatnam (Signed: Principal Smt. Badugu Karunasri, 17/06/2026)

B. GPS-Geotagged Fieldwork Photographs — Active Field Delivery Verification

The following GPS-geotagged photographs provide photographic verification of the VoteGuard platform's classroom delivery at Sri Gayatri Junior College. All images were captured using GPS Map Camera, with coordinates and timestamp metadata embedded in the image file.

GPS-geotagged fieldwork photographs documenting the VoteGuard project team presenting the platform overview directly inside the intermediate classrooms at Sri Gayatri Junior College, NAD Junction, Buchirajupalem, Apseb Colony, Nstl, Visakhapatnam 530027. GPS Coordinates: Lat 17.744629°, Long 83.230888°. Date and Time: Wednesday, 17/06/2026 at 10:01 AM GMT +05:30. Location verified independently by Google Maps GPS data embedded in image metadata.

Figure B.1: VoteGuard Team Presenting Platform Overview to Students — Sri Gayatri Junior College Classroom

C. Survey Completion Status Verification

The following table confirms the complete coverage of all survey sections and response collections:

Survey Module	Coverage	Response Count	Status
First Year – Section A (Student Focus Q1–Q7)	8 Junior Sections — Jr. MPC-A/B, Jr. BiPC-A/B, Jr. CEC-A/B, Jr. MEC-A/B	180	✓ COMPLETE
First Year – Section B (College Focus Q8–Q14)	8 Junior Sections — Jr. MPC-A/B, Jr. BiPC-A/B, Jr. CEC-A/B, Jr. MEC-A/B	180	✓ COMPLETE
First Year – Section C (Improvement Focus Q15–Q20)	8 Junior Sections — Jr. MPC-A/B, Jr. BiPC-A/B, Jr. CEC-A/B, Jr. MEC-A/B	180	✓ COMPLETE
Second Year – Section A (Student Focus Q1–Q9)	8 Senior Sections — Sr. MPC-A/B, Sr. BiPC-A/B, Sr. CEC-A/B, Sr. MEC-A/B	280	✓ COMPLETE
Second Year – Section B (College Focus Q10–Q16)	8 Senior Sections — Sr. MPC-A/B, Sr. BiPC-A/B, Sr. CEC-A/B, Sr. MEC-A/B	280	✓ COMPLETE
Second Year – Section C (Personal Focus Q17–Q22)	8 Senior Sections — Sr. MPC-A/B, Sr. BiPC-A/B, Sr. CEC-A/B, Sr. MEC-A/B	280	✓ COMPLETE
TOTAL SURVEY POPULATION	16 Sections — 8 Junior + 8 Senior	460	✓ ALL COMPLETE

D. Project Team Proof Reference

Faculty Supervisor: Mr. Siddharth Varma, Assistant Professor, Department of CSE – Data Science, Vignan's Institute of Information Technology (A).

Host Institution: Sri Gayatri Junior College, 58-21-49/2, NAD Junction, Buchirajupalem, Apseb Colony, Visakhapatnam – 530027, Andhra Pradesh | Principal: Smt. Badugu Karunasri, MSc, B.Ed., (PhD).
